EAN: 4250569403439

Description

This handy DVB-S2 measuring device for signal search in satellite systems offers a comprehensive range of functions for daily use when installing or checking TV systems. Thanks to the graphical user interface, all required functions such as the satellite search with the associated LNB settings, alignment of the satellite system, the spectrum analyzer and the constellation diagram can be easily activated and operated. For the installation of new systems there is a large LED display of the signal quality on the front of the device, which can be read very well even in poor lighting conditions or from a great distance. The power supply is provided by the integrated lithium-ion battery, which is charged via the included mains adapter. The handy design and the multitude of measuring functions make this device the ideal companion for every electrician or television technician in the field.
