

TS78L00

3-Terminal Low Current Positive Voltage Regulators

Voltage Range
5 to 24 Volts
Current
0.1 Ampere

Features

- ◊ Wide Range of Available, Fixed Output Voltages
- ◊ Low Cost
- ◊ Internal Short Circuit Current Limiting
- ◊ Internal Thermal Overload Protection
- ◊ No External Components Required
- ◊ Complementary Negative Regulators Offered (TS79L00 Series)
- ◊ Available in $\pm 4\%$ Voltage Tolerance

Ordering Informations

Device	Operating Temperature (Ambient)	Package
TS78LxxCT		TO-92
TS78LxxCS	-20°C ~ +85°C	SOP-8
TS78LxxCY		SOT-89

Absolute Maximum Ratings ($T_A = +25^\circ\text{C}$ unless otherwise noted.)

Parameter	Symbol	Value	Unit
Input Voltage	V_i *1	35	V
Input Voltage	V_i *2	40	V
Storage Junction Temperature Range	T_{stg}	-65 to +150	°C
Operating Junction Temperature Range	T_j	0 to +150	°C

Note: *1: TS78L05 to TS78L18 *2: TS78L24

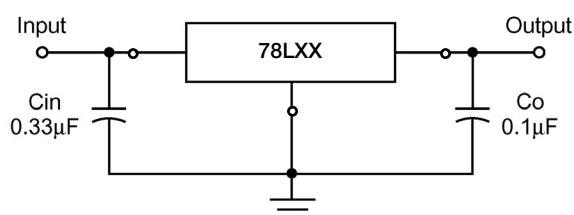

- This specification applies only for DC power dissipation permitted by absolute maximum ratings.
- Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible. Thermal effects must be taken into account separately. All characteristics are measured with 1 $0.33\mu\text{F}$ capacitor across the input and a $0.1\mu\text{F}$ capacitor across the output.

Standard Application

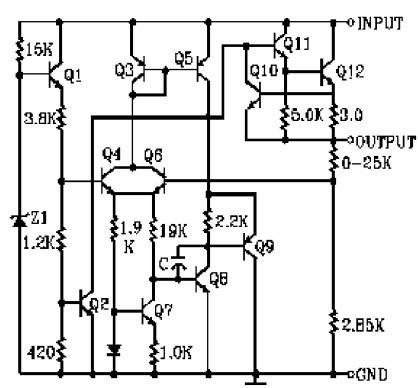

A common ground is required between the input and the output voltages. The input voltage must remain typical 2.0V above the output voltage even during the low point on the input ripple voltage.

C_{in} is required if regulator is located an appreciable distance from power supply filter.

C_o is not needed for stability, however, it does improve transient response.

Representative Circuit Schematic

Rev. 1 04/2003

TS78L05 Electrical Characteristics

($V_I = 10V$, $I_O = 40mA$, $C_I = 0.33\mu F$, $C_O = 0.1\mu F$, $0^\circ C < T_J < +125^\circ C$ unless otherwise noted.)
