

Power Resistor Thick Film Technology

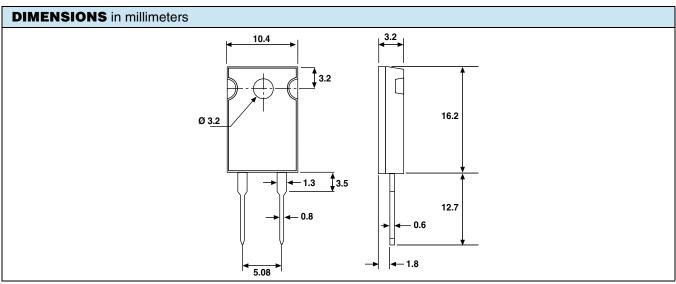

LTO series are the extension of RTO types. We used the direct ceramic mounting design (no metal tab) of our RCH power resistors applied to semiconductor packages.

FEATURE

- Direct mounting ceramic on heatsink
- \bullet Broad resistance range: 0.010 Ω to 550 $k\Omega$
- Non inductive
- TO-220 package: Compact and easy to mount
- Isolated case
- Compliant to RoHS directive 2002/95/EC

Note

• Tolerance unless otherwise specified: ± 0.3 mm

ENVIRONMENTAL SPECIFICATIONS

Temperature Range Climatic Category Flammability - 55 °C to + 155 °C 55/155/56 IEC 60695-11-5 2 applications 30 s separated by 60 s

ELECTRICAL SPECIFICATIONS			
Resistance Range	0.010 Ω to 550 k Ω		
Tolerances (Standard)	± 1 % to ± 10 %		
Dissipation and Associated	Onto a heatsink		
Power Rating and Thermal Resistance of the Component	50 W at + 25 °C (case temp.) R _{TH (j - c)} : 2.5 °C/W Free air: 2.5 W at + 25 °C See Performance table		
Temperature Coefficient			
Standard	± 150 ppm/°C		
Limiting Element Voltage U _L	250 V		
Dielectric Strength MIL-STD-202	1500 V _{RMS} - 1 min 10 mA max.		
Insulation Resistance	$\geq 10^4 \text{ M}\Omega$		
Inductance	≤ 0.1 μH		
Critical Resistance	1.25 kΩ

Typical Temperature Coefficient (- 55 ° to + 155 °C)	± 900 ppm/°C	± 700 ppm/°C	± 250 ppm/°C	± 150 ppm/°C	

CHOICE OF THE HEATSINK

The user must choose according to the working conditions of the component (power, room temperature). Maximum working temperature must not exceed 150 °C. The dissipated power is simply calculated by the following ratio:

$$P = \frac{\Delta T}{[R_{TH (j-c)} + R_{TH (c-a)}]}^{(1)}$$

Expressed in W

 ΔT : Difference between maximum working temperature and room temperature

Thermal resistance value measured between resistive layer and outer side of the resistor. It is the thermal R_{TH (j - c)}:

resistance of the component.

Thermal resistance value measured between outer side of the resistor and room temperature. It is the thermal R_{TH (c - a)}:

resistance of the heatsink itself (type, shape) and the quality of the fastening device, and the thermal resistance

of the thermal compound.

Example:

R_{TH (c - a)} for LTO 50 power rating 10 W at ambient temperature + 25 °C

Thermal resistance R_{TH (j - c)}: 2.5 °C/W

Considering equation (1) we have:

$$\Delta T = 150 \,^{\circ}\text{C} - 25 \,^{\circ}\text{C} = 125 \,^{\circ}\text{C}$$

$$R_{TH~(j~-c)} + R_{TH~(c~-a)} = \frac{\Delta T}{P} = \frac{125}{10} = 12.5 \text{ °C/W}$$

 $R_{TH~(c~-a)} = 12.5 \text{ °C/W} - 2.5 \text{ °C/W} = 10 \text{ °C/W}$

$$R_{TH (c-a)} = 12.5 \text{ °C/W} - 2.5 \text{ °C/W} = 10 \text{ °C/W}$$

with a thermal grease $R_{TH\ (c-h)}=1$ °C/W, we need a heatsink with $R_{TH\ (h-a)}=9$ °C/W.

Power Resistor Thick Film Technology

OVERLOADS

In any case the applied voltage must be lower than the maximum overload voltage of 375 V.

The values indicated on the graph below are applicable to resistors in air or mounted onto a heatsink.

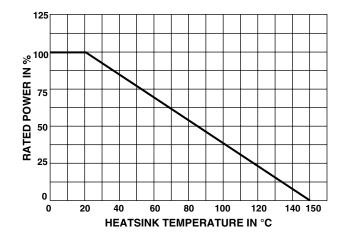

ENERGY CURVE

POWER RATING

The temperature of the case should be maintained within the limits specified.

To improve the thermal conductivity, surfaces in contact should be coated with a silicone grease and the torque applied on the screw for tightening should be around 1 Nm.
