Features

Multi-function and mono-function timer range

80.01 - Multi-function & multi-voltage 80.11 - On-delay, multi-voltage

- 17.5 mm wide
- Six time scales from 0.1s to 24h
- High input/output isolation
- 35 mm rail (EN 60715) mount
- "Blade + cross" both flat blade and cross head screw drivers can be used to adjust the range and function selectors, the timing trimmer, and to disengage the rail mounting clip
- New multi-voltage versions with "PWM clever" technology

80 Series - Modular timers 6 - 8 A

Features

Mono-function timer range

80.61 - Power off-delay (True off-delay), multi-voltage

80.82 - Star-delta, multi-voltage

- 17.5 mm wide
- Rotary range selector, and timing trimmer
- Four time scales from 0.05s to 3 min (type 80.61)
- Six time scales from 0.1s to 20min (type 80.82)
- High input/output isolation
- 35 mm rail (EN 60715) mount

80.61 / 80.82 Screw terminal

80.61

- Multi-voltage

| | ON | Closed | 15 - 16 | 15 - 18 | | |

^{*} The LED on type 80.61 is illuminated only when the supply voltage is applied to the timer; during the timing period the LED is not illuminated.

t<T

Wiring diagram

Without control signal = Start via contact in supply line (A1).

80.71

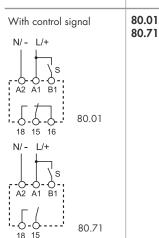

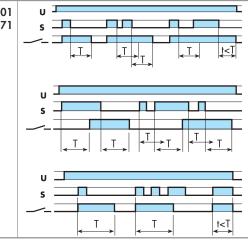

Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

(SW) Symmetrical flasher (starting pulse on).

Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

(BE) Off-delay with control signal.

Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.

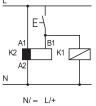

(CE) On- and off-delay with control signal.

Power is permenently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.

(DE) Interval with control signal on.

Power is permenently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

NOTE: The function must be set before energising the timer.

- A2 A1 \ O B1 O A1
- * With DC supply, positive polarity has to be connected to B1 terminal (according to EN 60204-1).

• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.

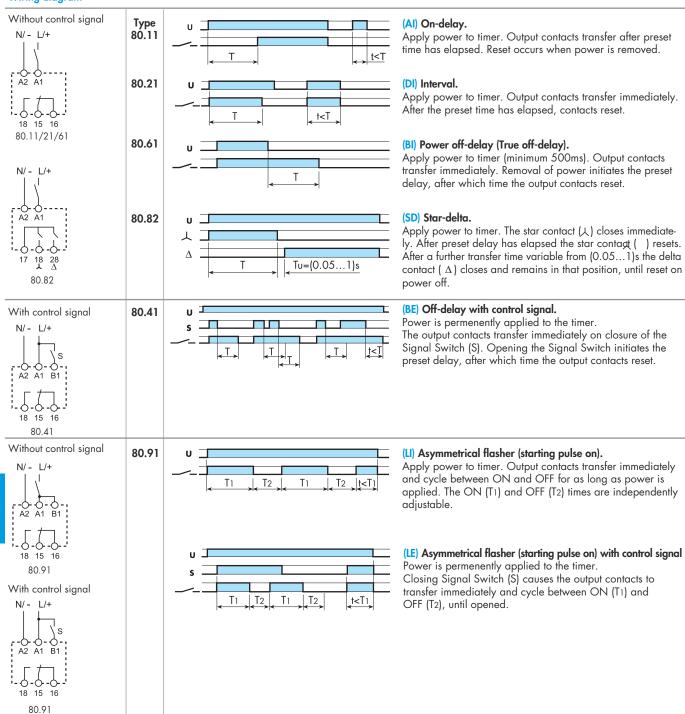

^{*} A voltage other than the supply voltage can be applied to the command Start (B1), example: A1 - A2 = 230 V AC

B1 - A2 = 12 V DC

Functions

Wiring diagram

• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.

* With DC supply, positive polarity has to be connected to B1 terminal (according to EN 60204-1).

** A voltage other than the supply voltage can be applied to the command Start (B1), example: A1 - A2 = 230 V AC B1 - A2 = 12 V DC
