

OKY2103

Product Name: UNO ProtoShield Prototype Expansion Board UNO R3 ProtoShield Shield With SYB-170 Mini Breadboard Based

Description:

This ProtoShield prototype expansion board is designed for building prototype circuit. Components can be soldered directly onto the board and the board can be connected to circuit through above mini breadboard. The breadboard and circuit board are connected to each other by Double-sided adhesive. It should be noted that the breadboard and circuit board are disconnected when sold. ProtoShield prototype expansion board carries two LED and two button circuits, all of which are ready for use. All pins and power supply have been extracted, making the board the best match.

Specification:
