## APPLICATION

As power resistors in electrical and electronic circuitry.

## DESCRIPTION

These resistors have a single layer of resistance wire wound on a ceramic body. Leads of solder-coated copper-clad wire are secured to caps which are force-fitted on to the ends of the ceramic body. The resistor is coated with brown enamel.

The length of the resistor body is measured by inserting the leads into the holes of two identical gauge plates and by moving these plates parallel to each other until the resistor body is clamped without deformation (see IEC publication 294). The diameter of the holes in the gauge plate is 1,0 mm.

## Mass (per 100 pieces)

WR0617E	116 g
WR0825E	210 g
WR0842E	335 g
WR0865E	450 g

## Mounting

The resistors must be mounted in such a way that:

- no stress is exerted on the leads so as to allow thermal expansion over the wide temperature range.
- nearby components and materials are not affected by the dissipated heat.

## Marking

Each resistor is marked with:

- resistance value (R for  $\Omega$ , K for  $k\Omega$ )  
e.g. 27  $\Omega$  = 27R  
27  $k\Omega$  = 27K

- tolerance on resistance in %

- rated dissipation at  $T_{amb} = 70^\circ\text{C}$

Example: 27R 5%  
4W

## COMPOSITION OF THE CATALOGUE NUMBER

The catalogue number in Table 2 is completed by inserting the resistance code: the first two significant figures of the resistance value (in  $\Omega$ ) followed by:

- 8 for R of 4,7 to 9,1  $\Omega$
- 9 for R of 10 to 91  $\Omega$
- 1 for R of 100 to 910  $\Omega$
- 2 for R of 1 to 9,1 k $\Omega$
- 3 for R of 10 to 91 k $\Omega$
- 4 for R of 100 k $\Omega$

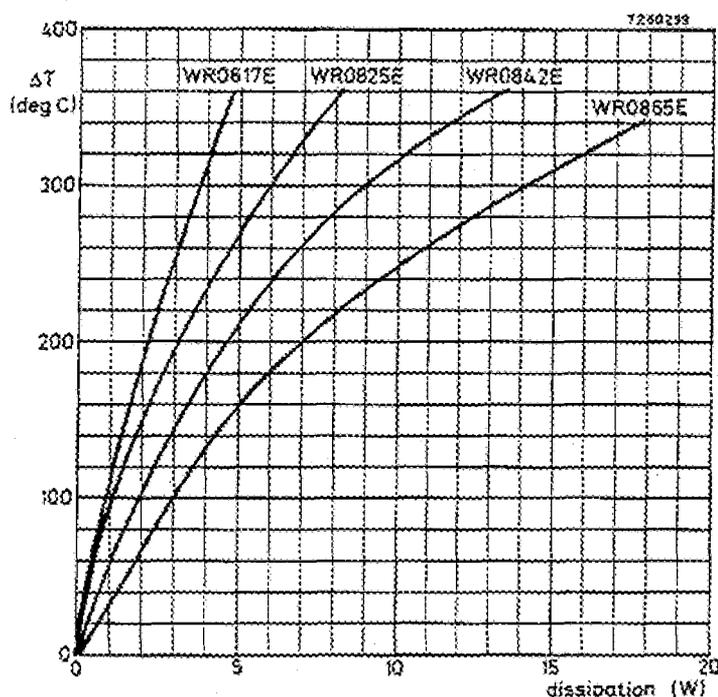

Fig. 2 Temperature rise ( $\Delta T$ ) of the resistor body as a function of the dissipation. Distance between cap and solder joint is 10 mm.

## TESTS AND REQUIREMENTS

Essentially all tests are carried out according to the schedule of IEC publications 266 and 266A, category 55/200/56 (rated temperature range  $-55^{\circ}\text{C}$  to  $+200^{\circ}\text{C}$ ; damp heat, long term, 56 days) and along the lines of IEC publication 68, "Recommended basic climatic and mechanical robustness testing procedure for electronic components". In the following table the tests are listed with reference to the relevant clauses of IEC publications 266, 266A and 68; a short description is also given of the test procedure and requirements. In some instances deviations from the IEC recommendation were necessary for our method of specifying.
